

*Tired of cut wireline increasing your NPT, extending your schedule, and increasing costs?*

Intelligent Wellhead Systems' Wireline Spool safeguards against costly cut wireline incidents by detecting its presence in the well and preventing unintended valve actuation. This ensures minimal downtime and avoids additional equipment expenses.

Using magnets, our Wireline Spool identifies tool size and location in the well through a disturbed magnetic field as tools pass through. Calibration for temperature and pipe information is essential for optimal performance.

Our Wireline Spool is compatible with various vendors and operates seamlessly without requiring specialized valves. All operational data is conveniently aggregated and displayed on our user-friendly inVision® platform, allowing simultaneous monitoring of data and operations. Our system is highly adaptable to unforeseen changes in Standard Operating Procedures (SOP), eliminating the need for a complete system overhaul in case of unexpected events.

Stay flexible and in control with our Wireline Spool technology.

## Value to your operation

 Increased operational efficiency
  Increased reliability
  Increased cost savings

Key Features	Competing Product	Wireline Spool
Vendor-neutral valve compatibility	X	✓
Operational flexibility with SOP changes	X	✓
Easy integration with operational data	X	✓
