

*A Convergence of Operational Data into Operational Intelligence  
Allowing Data-Driven Decision Making that Drives Operational Efficiencies & Cost Savings*

Enhance operational efficiency with inVision Live™, a comprehensive platform that seamlessly integrates operational data into an organized, unified dashboard providing valuable insights into your operation. The inVision system® connects services, digitizes workflows, and adds engineered controls so that the industry's most valuable people can focus on their most important tasks. Through edge-server hosted IIOT and data-driven logic control, onsite controls and hydraulic valve interlocks are automated via the IWS standard data model, which delivers consistent time-series reference values and metadata. The inVision platform incorporates Microsoft solutions (Azure, Dynamics 365, Teams, Time Series Insights) for powerful, live data analytics which further promote operational efficiency and informed, data-based decision making.

The inVision platform offers a vendor flexible hub for digital data for all onsite services including wireline and frac. This dashboard displays real-time completions data at the wellsite, control center or any remote location making it possible for remote operations management. It also provides a digital window into pressure control equipment with the proprietary inVision Wireline Detection Spool™. Digital Handshakes®, enabled by data-driven logic based on customer SOPs, create engineered controls of valve movement reducing the risk of human error and costly incidents including cut wireline. By introducing engineered controls, overall operational efficiency improves – providing cost savings to the operation. Well swap times are reduced to less than 5 minutes per stage saving thousands of dollars per stage.

Say goodbye to manual data entry tasks by automating data entry. The result – improved data accuracy, reduced data gaps in wellsite reporting, and focus redirected to core operations. Deliver a powerful platform for your completions engineering team to optimize and strategize outcomes. Provide high-quality, field-driven data and an architecture to empower your data science teams. Break down communication barriers, maintain vendor choice freedom, and ensure flexibility in your operations. Connect services, enhance situational awareness, and take control of your operations.

Elevate your operations with inVision Live™ for a seamless and data-driven approach to success.
